

# AKA SHOPPING

## Online Shopping System Implementation Report

### 1. Application Overview:

The online shopping system is a web-based platform designed to provide users with a seamless and convenient shopping experience. The system features several key pages:

- **Home Page (Home.html):** The main landing page with a user-friendly interface, a navigation bar, and a featured products section.
- **Login Page (Login.html):** A simple login page allowing administrators to access the admin control.
- **Delivery Management (Delivery.html):** A page for tracking and managing deliveries, including a table for entering delivery details.
- **Product Categories (Categories.html):** A page displaying a table of product categories for easy navigation.
- **Description Page (Description.html):** A straightforward page with a centered text description of the online shopping system.
- **Customer Reviews (Review.html):** A page where customers can submit reviews with their email, phone number, and comments.
- **Shopping Cart (Cart.html):** A basic cart page with an empty table that populates when products are added.
- **Membership Discounts (Discounts.html):** A page with boxes for choosing memberships.
- **Contact Information (Contacts.html):** A page displaying contact information for administrators.

### 2. Frameworks and Technologies:

- The implementation of the online shopping system uses HTML for structuring the pages and Bootstrap for styling, ensuring a responsive and visually appealing design. The use of Bootstrap facilitates the creation of a responsive navigation bar, grid layout, and styled components such as cards and forms.
